

ABSTRACT OF THE DISCLOSURE

An absorbent swimwear garment having an antimicrobial agent based on hydantoin chemistry for the purpose of eliminating or reducing the level of bacteria in swim water. During initial product use, the absorbent swimwear garment is able to contain urine and bowel movements, similar to ordinary diapers and training pants. When the swimwear garment is submersed in swim water, particularly chlorinated or brominated water, the antimicrobial agent is stabilized and is thereby able to eliminate E. coli and other fecal bacteria from the swim water.
